

## String data types

Data type	Description
<b>CHAR(size)</b>	A FIXED length string (can contain letters, numbers, and special characters). The <i>size</i> parameter specifies the column length in characters - can be from 0 to 255. Default is 1
<b>VARCHAR(size)</b>	A VARIABLE length string (can contain letters, numbers, and special characters). The <i>size</i> parameter specifies the maximum column length in characters - can be from 0 to 65535
<b>BINARY(size)</b>	Equal to CHAR(), but stores binary byte strings. The <i>size</i> parameter specifies the column length in bytes. Default is 1
<b>VARBINARY(size)</b>	Equal to VARCHAR(), but stores binary byte strings. The <i>size</i> parameter specifies the maximum column length in bytes.
<b>TINYBLOB</b>	For BLOBs (Binary Large Objects). Max length: 255 bytes
<b>TINYTEXT</b>	Holds a string with a maximum length of 255 characters
<b>TEXT(size)</b>	Holds a string with a maximum length of 65,535 bytes
<b>BLOB(size)</b>	For BLOBs (Binary Large Objects). Holds up to 65,535 bytes of data
<b>MEDIUMTEXT</b>	Holds a string with a maximum length of 16,777,215 characters
<b>MEDIUMBLOB</b>	For BLOBs (Binary Large Objects). Holds up to 16,777,215 bytes of data
<b>LONGTEXT</b>	Holds a string with a maximum length of 4,294,967,295 characters
<b>LOBLOB</b>	For BLOBs (Binary Large Objects). Holds up to 4,294,967,295 bytes of data
<b>ENUM(val1, val2, val3, ...)</b>	A string object that can have only one value, chosen from a list of possible values. You can list up to 65535 values in an ENUM list. If a value is inserted that is not in the list, a blank value will be inserted. The values are sorted in the order you enter them
<b>SET(val1, val2, val3, ...)</b>	A string object that can have 0 or more values, chosen from a list of possible values. You can list up to 64 values in a SET list

## Numeric data types

Data type	Description
<b>BIT(<i>size</i>)</b>	A bit-value type. The number of bits per value is specified in <i>size</i> . The <i>size</i> parameter can hold a value from 1 to 64. The default value for <i>size</i> is 1.
<b>TINYINT(<i>size</i>)</b>	A very small integer. Signed range is from -128 to 127. Unsigned range is from 0 to 255. The <i>size</i> parameter specifies the maximum display width (which is 255)
<b>BOOL</b>	Zero is considered as false, nonzero values are considered as true.
<b>BOOLEAN</b>	Equal to BOOL
<b>SMALLINT(<i>size</i>)</b>	A small integer. Signed range is from -32768 to 32767. Unsigned range is from 0 to 65535. The <i>size</i> parameter specifies the maximum display width (which is 255)
<b>MEDIUMINT(<i>size</i>)</b>	A medium integer. Signed range is from -8388608 to 8388607. Unsigned range is from 0 to 16777215. The <i>size</i> parameter specifies the maximum display width (which is 255)
<b>INT(<i>size</i>)</b>	A medium integer. Signed range is from -2147483648 to 2147483647. Unsigned range is from 0 to 4294967295. The <i>size</i> parameter specifies the maximum display width (which is 255)
<b>INTEGER(<i>size</i>)</b>	Equal to INT( <i>size</i> )
<b>BIGINT(<i>size</i>)</b>	A large integer. Signed range is from -9223372036854775808 to 9223372036854775807. Unsigned range is from 0 to 18446744073709551615. The <i>size</i> parameter specifies the maximum display width (which is 255)
<b>FLOAT(<i>size</i>, <i>d</i>)</b>	A floating point number. The total number of digits is specified in <i>size</i> . The number of digits after the decimal point is specified in the <i>d</i> parameter. This syntax is deprecated in MySQL 8.0.17, and it will be removed in future MySQL versions
<b>FLOAT(<i>p</i>)</b>	A floating point number. MySQL uses the <i>p</i> value to determine whether to use FLOAT or DOUBLE for the resulting data type. If <i>p</i> is from 0 to 24, the data type becomes FLOAT(). If <i>p</i> is from 25 to 53, the data type becomes DOUBLE()
<b>DOUBLE(<i>size</i>, <i>d</i>)</b>	A normal-size floating point number. The total number of digits is specified in <i>size</i> . The number of digits after the decimal point is specified in the <i>d</i> parameter

**DOUBLE PRECISION(*size, d*)****DECIMAL(*size, d*)**

An exact fixed-point number. The total number of digits is specified in *size*. The number of digits after the decimal point is specified in the *d* parameter. The maximum number for *size* is 65. The maximum number for *d* is 30. The default value for *size* is 10. The default value for *d* is 0.

**DEC(*size, d*)**

Equal to DECIMAL(*size, d*)

## Date and Time data types

Data type	Description
<b>DATE</b>	A date. Format: YYYY-MM-DD. The supported range is from '1000-01-01' to '9999-12-31'
<b>DATETIME(<i>fsp</i>)</b>	A date and time combination. Format: YYYY-MM-DD hh:mm:ss. The supported range is from '1000-01-01 00:00:00' to '9999-12-31 23:59:59'. Adding DEFAULT and ON UPDATE in the column definition to get automatic initialization and updating to the current date and time
<b>TIMESTAMP(<i>fsp</i>)</b>	A timestamp. TIMESTAMP values are stored as the number of seconds since the Unix epoch ('1970-01-01 00:00:00' UTC). Format: YYYY-MM-DD hh:mm:ss. The supported range is from '1970-01-01 00:00:01' UTC to '2038-01-09 03:14:07' UTC. Automatic initialization and updating to the current date and time can be specified using DEFAULT CURRENT_TIMESTAMP and ON UPDATE CURRENT_TIMESTAMP in the column definition
<b>TIME(<i>fsp</i>)</b>	A time. Format: hh:mm:ss. The supported range is from '-838:59:59' to '838:59:59'
<b>YEAR</b>	A year in four-digit format. Values allowed in four-digit format: 1901 to 2155, and 0000. MySQL 8.0 does not support year in two-digit format.
